

Gauri Bhonsle

Computer Engineering student with hands-on experience in ML-based decision systems, process analytics, and compliance workflows. Interested in AI-led process transformation and business automation

Education

KJ Somaiya College of Engineering- Mumbai

BTech - Computer Engineering

Aug. 2023– Present

Experience

Data Analyst Intern | Synergy Marine Group

Dec 2025- Jan 2026

- Mapped and documented cross-functional communication and delivery workflows across Agile sprint cycles – identifying decision ownership gaps, structuring task accountability frameworks, and maintaining progress reporting for on-time execution across teams
- Developed structured decision-support frameworks for management-level stakeholders by translating complex vessel operational data into KPI dashboards – enabling faster, data-backed decisions across fleet operations
- Built an end-to-end automation pipeline ([Vessel Fuel & CO₂ Predictor](#)) replacing manual reporting with real-time prediction logging via Google Sheets API and a Power BI dashboard – reducing operational overhead and delivering live fleet-level insights to decision-makers

Web Design Intern | Digital Team – SAN HR & Advisors

June 2024- Aug 2024

- Collaborated with cross-functional stakeholders to translate business requirements into structured, user-focused digital solutions – improving information clarity and client-facing communication workflows
- Applied structured problem-solving and UX principles to deliver web content aligned with stakeholder goals and end-user needs

Projects

[ForensiAir](#) – Emission Tamper Detection System | *Python, FastAPI, React, TimescaleDB, XGBoost, SHAP (ongoing)*

- Designed structured approval workflows and role-based access tiers for MPCB officials – enforcing regulatory compliance requirements and replacing manual review processes with an automated decision pipeline
- Built an ensemble ML system detecting emission data tampering across monitored factories – achieving 100% precision with zero false positives; findings structured into actionable compliance reports for regulatory stakeholders

[BrandSetu](#) - AI-powered multi-agent automated social media content generation platform

- Agentic Automation & Approvals: Built an end-to-end multi-agent pipeline using LangGraph that routes data through a "Sentinel" critique agent to enforce programmatic revision loops and approval gates, eliminating manual oversight.
- Intelligent Knowledge Retrieval: Developed a FastAPI backend with a Supabase pgvector RAG pipeline for real-time semantic retrieval of organizational context, utilizing a resilient LLM fallback mechanism.

[Smart Product Pricing](#) – Amazon ML Hackathon 2025

- Multimodal ML model (DeBERTa-v3 + EfficientNet-B4 + LightGBM) for product price prediction, optimized on SMAPE metric.

Programming Skills

- **Languages** – Python, SQL, Java, R
- **Data & Analytics** – Pandas, NumPy, Scikit-learn, Power BI, Tableau, Data Modeling, Data Visualization
- **AI / ML** – Machine Learning (Random Forest, LightGBM), NLP, Multimodal Models, RAG Pipelines, LangChain
- **Full Stack** – React, Node.js, Express.js, MongoDB, FastAPI

Certifications

- *Understanding Financial Markets* – **University of Geneva(Coursera)**
- *Advanced Business Analytics: Excel Optimization & Simulation* –**Johns Hopkins University(Coursera)**
- *McKinsey Forward Learning Program* – **McKinsey & Company**
- *Data Analytics Job Simulation* – **Deloitte Australia (Forage)**
- *Introduction to TensorFlow for AI, ML & Deep Learning* – **DeepLearning.AI (Coursera)**
